

iGrow 800 - Saving & Restoring Configurations

The Save and Restore option lets you label and store your program in either the internal memory of the iGrow 100 Series controller or a USB drive (jump drive).

You may have programs for different crops or for different seasons of the year. This will be a convenient way of storing your programs with the capability to restore the program whenever desired.

Save Configuration: Allows the user to store the controller settings/configuration to on-board memory or USB.

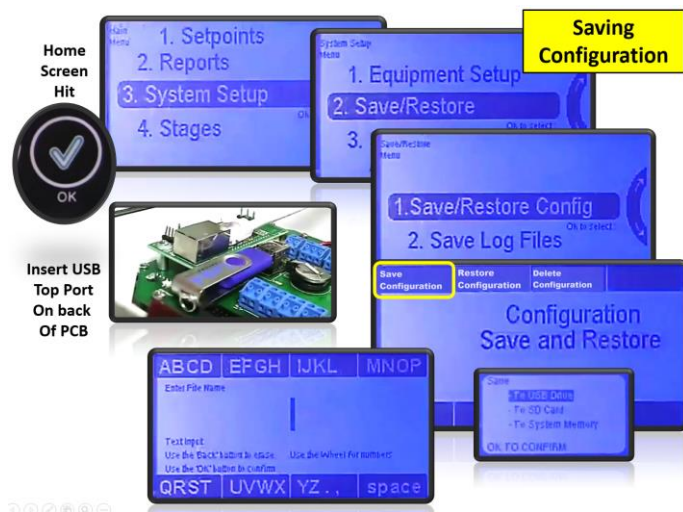

Restore Configuration: Allows the user to restore the configuration stored on the on-board system memory or USB.

Delete Configuration: Allows the user to delete the configuration files stored in system

Click below on a tutorial on save and restore configurations for the iGrow 800 controller.
