

Automated fertigation solutions combining H.E. Anderson Injectors and Link4 Controllers

- Developed for indoor or greenhouse projects.
- Direct inject or batch applications for projects of all sizes.
- Nutrient delivery to single or multiple zones.
- Recipes created, stored, and initiated through the iGrow 1800 controller.
- Customize multiple nutrients, delivery times, and flow rates.
- Automate recipe switching resulting in reduced errors and time.
- Control environmental functions and fertigation with one controller.
- Easy programming through Link4's newest cloud based platform.
