

LINK4 I-SERIES CLOUD

REMOTE ACCESS & STORAGE

Link4
CORPORATION

CS-CLOU-01-1122

COMPATIBLE CONTROLLERS

- iPonic 614
- iPonic 624
- iPonic 614 Commercial
- iPonic 624 Commercial
- iPonic Alert
- Sapphire Commercial Irrigation Controller
- iGrow 800

FEATURES

- Real time monitoring and management
- User access and level management
- Controller management
- Multi-user capabilities
- Custom reporting and graphing
- Alarm and notifications
- NEW Grow journal data entry, storage and reporting

• Features may vary depending on subscription level.

TECHNICAL REQUIREMENTS

- Internet connection
- Internet ready mobile device

Additional fees may apply depending on the Cloud subscription level.

DESCRIPTION

Welcome to the I-Series cloud! This is where your Link4 controllers are connected for easy, convenient remote management. In a few easy clicks, using Link4's advance technology, you and your hardware will be connected. Rest assured, the connection and the centralized storage database are completely secure. No unauthorized access will be granted. You can proceed with confidence.

New user management features have been added to allow for greater flexibility and security. Add multiple users and assign them to specific controllers with specific security levels. Additional flexibility allows you to choose which controllers you want active on the cloud at one time.

The stored data allows you to report, graph or download the collected data for analysis. Use this information to improve growing techniques or analyze successes.

The built in alarm and notification features provide you comfort knowing that you will be notified (email / text) when unusual conditions occur. Another new feature is that the alarms and notifications are logged for later review.

Do you want to **measure VPD (Vapor Pressure Deficit)**? Link4 has now provided you the ability to monitor your VPD level. This new feature analyzes¹ your environment and provides you an on-screen reading as well as the ability to set alarm and notification parameters.

The newly added **Grow Journal** eliminates the need of paper and pen when logging grower or maintenance notes. Enter critical information from your remote device where it will be stored with the date and time. Set up custom categories so you can organize the notes when you develop reports from the information you have entered.

• ¹ User settings are required for proper results.
